DETAILED ACTION

In view of the papers filed 11/04/2003, it has been found that this nonprovisional application, as filed, through error and without deceptive intent, improperly set forth the inventorship, and accordingly, this application has been corrected in compliance with 37 CFR 1.48(a). The inventorship of this application has been changed by adding Mark Gerald Schrom as a joint inventor.

The application will be forwarded to the Office of Initial Patent Examination (OIPE) for issuance of a corrected filing receipt, and correction of the file jacket and PTO PALM data to reflect the inventorship as corrected.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6-9, 12-14, 16-18, 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Nita et al. (US 5951539).

Nita discloses a catheter body and method of making a catheter body comprising a inner insulator formed about a central mandrel, an outer insulating around the inner insulator and a conductor wound about the inner insulator, wherein the outer and inner insulators are fused by heat to each other. It is noted that the word “fuse” is defined by Webster’s Collegiate

Art Unit: 3742

Dictionary Tenth Edition as *to stitch by applying heat and pressure with or without the used of adhesive*. A shrink-wrappable polyethylene tubing is placed on the exterior of the tubing and the assembly is heated. A polyethylene shrink-wrap pulled the various tubing members down to the coil surface. The polyethylene shrink-wrap tubing was then stripped from the exterior of the assemblies.

Response to Arguments

Applicant's arguments filed 10/30/03 have been fully considered but they are not persuasive. Applicants argument with respect to the inner an outer insulators not being "fused" is not persuasive because the term "fuse" in it broadest interpretation includes *to stitch by applying heat and pressure with or without the used of adhesive* as is discussed by Nita. Additionally, though the reinforcing members of Nita may infact be only for reinforcement, they are still, in the broadest sense conductors and therefore anticipate the claims.

Allowable Subject Matter

Claims 4-5, ~~10~~11, 15 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
